## Objective: Saving on Shipping Costs

## Solution: Package Design

BY RANDY PALMER

With the introduction of “DIM Weight” measuring by Fed Ex and UPS to determine shipping rates, the cost of doing business has dramatically increased. Especially on overnight shipments.

To add to the confusion, divisors used to determine your rates can be as variable as the products you ship. This means even more potential charges.

At Accutech Packaging our engineers, designers and sales team are well versed and trained in the DIM Weight rules of engagement.

This knowledge combined with our manufacturing capabilities of cold chain, food, manufacturing and retail packaging are designed with one goal in mind.

To provide solutions, which deliver the best performing, most efficient use and lowest cost per use packaging products available.

Call to see how the Accutech team can help you start saving on your shipping cost today!

---

**About Accutech:** Accutech Packaging produces custom plastic thermoformed packaging, paper mailers and envelopes, and paperboard specialties. We also offer in-house tooling, design and product fulfillment. In addition, Accutech manufactures mail order packaging equipment to automate the outbound shipping process.
