

## Cold Chain & Temperature Assurance Packaging

Delivering the right products for your critical applications.

The challenges of cold chain / temperature assurance packaging are nearly as daunting as the science of the medicines and products it protects. There are many products and companies making claims with little or no evidence. And everyone is looking for a more environmentally-friendly cold chain /temperature assurance solution. The question is, where can you find the right solution for you.

Whether 2-8 degrees Celsius, controlled room temperature or minus 70 and everything in between, how you maintain those temperatures for the required time AND do it cost effectively, can be a miracle of modern science.

At Accutech Packaging's Cold Chain / Temperature Assurance Division, we start with your application. Completely understanding your requirements allows

us to create the right solution for your product and budget. This includes the proper insulation, design, testing (in both lab and shipping lane), test results and manufacturing, all done by the Accutech team.

Accutech, along with our supplier partners, can create temperature-controlled shipping packages with various insulating materials such as vacuum insulation panels, polyurethane foam, EPS coolers/panels and curbside-recyclable paper. We can provide in-house design, access to full lab and shipping lane testing, as well as a complete offering of gels.

Combining these capabilities with our in-house thermoforming capabilities allows Accutech to provide cold chain solutions with ease-of-use in mind and performance you can count on.

***At Accutech, our mission is the keep your product safe and your cost sensible.  
Call today and see if one of our standard products is right for you, or explore the variety of  
custom products and services we can provide, designed to meet your unique needs.***
