

Autofulfillment[®] Box System

- Two operators (or one with automatic induction)
- Orders completely packed, sealed and labeled
- Including packsliips and inserts.
- 12 packs per minute
- Bagger Control System (BCS) for speed and order accuracy

The Autofulfillment Box System is the perfect solution for automating the packaging of any item(s) that would normally be packaged and shipped in a carton including footwear, cosmetics, accessories, electronics, toiletries, jewelry, and many other potential products.

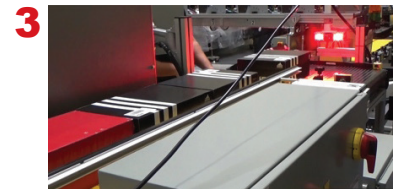

System functions include carton erecting, bottom case sealing, print-and-apply shipping label applicator, and automatic case closure and top case sealing. Other options available include printing and insertion of pack slips or returns label, insertion of customer-specific marketing collateral, weighing for rate shopping or check weigh, LPN or package contents label printing and application.

Operator #1 loads product to be packed onto the infeed conveyor.

Box is erected and bottom is taped.

Barcode is scanned.

Operator #2 loads product into cartons.

Content label is printed, applied to box and verified.

Packslip is printed, verified and inserted into the box.

Shipping label is printed, applied to box and verified.

Reject station: Box is diverted for wrong shipping label or cancelled order.

Customer-specific collateral inserts are dispensed into box.

Box flaps are closed and taped.

Please contact us if you would like to learn more about this system.
